

CryPrice

Crypto Analytics & DeFi Risk Monitoring Infrastructure

CryPrice is a multi-chain crypto analytics platform for price aggregation, wallet and portfolio tracking, Aave Health Factor monitoring, and Telegram risk alerts. The project combines a production Node.js backend, Web3 integrations, data storage, background jobs, and a Flutter frontend.

Website: cryprice.dev

Role: Founder / Backend Developer

CEX + DEX	Aave V3	Telegram	REST API
price aggregation	risk monitoring	real-time alerts	frontend & bot integrations

Core Features

- CEX/DEX price aggregation and current price storage
- Wallet and portfolio tracking across supported networks
- Aave Health Factor monitoring and risk alerts
- Telegram bot notifications for DeFi users
- REST API for frontend, analytics, and bot workflows

Technical Scope

- Node.js / Express backend architecture
- PostgreSQL data model and Redis caching layer
- ethers.js blockchain integrations and adapters
- Cron-based data synchronization jobs
- VPS deployment with Nginx, PM2, and Linux

Technology Stack

Node.js	TypeScript/JavaScript	Express	PostgreSQL
Redis	ethers.js	Telegram Bot	Docker
Nginx	PM2	Linux	Flutter

What this project demonstrates

CryPrice shows hands-on experience building production-oriented crypto infrastructure: backend APIs, Web3 data pipelines, risk monitoring, database design, caching, automation, and deployment. It is directly relevant to Web3, DeFi, fintech, analytics, and backend integration work.
